Re: Proposed Bruce Steam Generator Shipments

Dear Canadian Nuclear Safety Commission,

Please provide an Environmental Assessment with a Full Panel Review. The attempts by Bruce Power to ship these radioactive steam generators under the EA conducted in 2006 is unacceptable. This is a classic 'bait and switch'. For the CNSC to allow this project to proceed without a Full Panel Review will further erode the credibility of the CNSC. The September 28-29th hearing amounted to a mockery of the public process.

The Coalition for a Nuclear-Free Great Lakes respectfully requests financial support in order to secure and contract for Independent Review of this proposed unscrutinized project. The submittal by Bruce Power of additional documentation serves to demonstrate that they had purposefully withheld the information from the public in the first place. This is not the way to gain public trust.

We look forward to participating in a Full Panel Review and will dedicate our resources in that review process.

Thank you

Michael J. Keegan

Chair, Coalition for a Nuclear-Free Great Lakes
